Sistema de Estructura Tubular *Tubular Framing System*

Sistema de estructuras Tubulares

Tubular Framing System

El Sistema de Estructuras Tubulares (TFS) es un sistema modular flexible compuesto de perfiles tubulares y sus accesorios correspondientes, brindando una amplia gama de posibilidades. Flow Racks, transportadores, estaciones de trabajo o cualquier otro sistema estructural. La característica clave de este sistema es su fácil manipulación, ofreciendo una máxima eficiencia en costos.

Tubular Framing System (TFS) is a flexible modular system composed of profile tubes and accessories to build a diverse range of possible flow racks, material shuttles, workstations and any other frame system. Simple handling is the key feature of TFS and delivers maximum cost efficiency.

Características

Features

Simple / Easy concept	Versátil / Versatile	Eficiente / Efficient	Reutilizable / Reusable	Atractivo / Attractive design
<p>Módulos simples y de fácil combinación.</p> <p><i>Simple and easy-to-combine modules</i></p>	<p>Brinda diferentes posibilidades debido a su composición modular, permitiendo al usuario reconfigurar estructuras de acuerdo a su necesidad.</p> <p><i>It offers different possibilities due to its modular nature, allowing the user to reconfigure structures according to their needs.</i></p>	<p>Ensamble rápido, y estable. Contempla diversas necesidades dentro de la industria. Excelente relación calidad precio.</p> <p><i>Quick and stable assembly. It addresses various needs within the industry. Best value for money.</i></p>	<p>Excelente durabilidad. Los perfiles y accesorios pueden ser reutilizados, dando un nuevo ciclo de vida al producto.</p> <p><i>Profiles and Accessories can be reused, giving a new life cycle to the product.</i></p>	<p>Forma, Función y Estética combinadas para ofrecerte la mejor solución.</p> <p><i>Combine aesthetic appeal with creative problem-solving.</i></p>

Aplicaciones

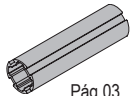

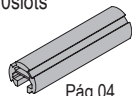

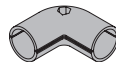

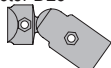

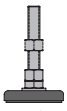

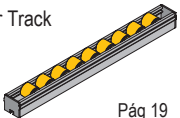

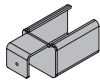

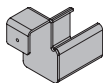

Applications

Este sistema es ampliamente utilizado en fábricas, depósitos y especialmente en procesos de montaje de la industria electrónica y automotriz. Es una herramienta esencial para las integraciones de logística.

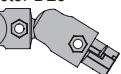

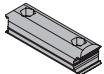

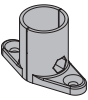

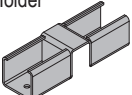

This system is widely used in factories, warehouses and especially in assembly processes such as electronics and automotive industries. It is an essential tool for logistics integrations.

Perfil Tubular
Tube Profile

El perfil tubular TFS presenta una tolerancia estandar según norma GB 5237-2008. El tratamiento de la superficie es anodizado satinado. La longitud estándar de los perfiles es de 5800mm.

TFS Profile Tube applies standard tolerance of GB 5237-2008, the surface treatment is satin anodized. Standard length of delivery profiles is 5800mm.

Pata niveladora - Pata giratoria

Leveling Foot - Swivel Foot

La pata giratoria permite apoyar la estructura en zonas que requieren un ajuste de altura. La rótula que existe entre la base y el perno, permite que la pata gire con un ángulo de hasta 30 grados. Se utiliza para equipos que necesitan ser movidos regularmente o que se apoyan en superficies irregulares.

The Swivel Foot is used to support the structure where gradual height adjustment is needed and where the floor slope is significant. The Swivel Foot has a ball joint between the base and the spindle that allows the foot to swivel up to an angle of 30°.

Riel de Rodillos

Flow Roller Track

Material y Color: Ruedas de rodillo-ABS YW (Yellow/Amarillo) GY (Gray/Gris) BK (Black/Negro)
 Estructura del Riel de rodillos: Aleación de Aluminio Anodizado

Los Rieles de Rodillos pueden ser utilizados para montar sistemas de almacenamiento tipo "Carton Flow Rack" donde el producto se alimenta por el extremo trasero, y el picking se realiza por el extremo delantero. Los rodillos son fabricados en PVC de alta calidad que tiene ventajas de bajo coeficiente de fricción, larga vida útil, y resistencia a los ácidos y a la humedad. Se podrán configurar sistemas con varias pistas para repartir la presión que ejerce el bulto a transportar sobre el riel.

Flow Roller Track can be used for "Carton Flow Rack" type storage systems where the product is fed from the rear end, and picking is done from the front end. The rollers are made of high quality PVC which has the advantages of low coefficient of friction, long service life, and resistance to acids and moisture. Systems with several tracks can be configured to distribute the weight.

Slide Adapter D28

Material: Aluminio Fundido / *Aluminium Casting*

El Adaptador Deslizante D28 se usa con un Conector D28 para una unión transversal entre dos perfiles tubulares, permitiendo la movilidad a lo largo del perfil.

Slide Adapter D28 is used with a D28 Connector for a transverse connection between two tubular profiles, allowing mobility all along

Descripción	Masa (g)	Part No.
Slide Adapter D28	31.5	TFS.D28.8.04

Perfil de Suspensión
Suspension Profile

Material: Aluminio Extruido / *Extruded Aluminium*

El Perfil de Suspensión se usa para colgar cajas de materiales, sujetándolo al Perfil Tubular D28 con un Conector Paralelo A.

The Suspension Profile is used to hang boxes, attaching it to the D28 Tubular Profile with a Parallel Connector A.

Descripción	Masa (kg/m)	Longitud L(mm)	Part No.
Suspension Profile	0.51	0-5800	TFS.D28.8.05

Nota: El largo puede ser personalizado de acuerdo a los requerimientos del cliente (Lmax. =5800mm).

Note: The length can be customized according to client's requirements (Lmax. =5800mm).

⚠ Las cajas de materiales se pueden sujetar directamente al Perfil Tubular D28 usando el Perfil SW D28 o el Perfil DW D28, ver Fig (1-1).
